AN INSIDE LOOK AT **INERLOCK™**

AVAILABLE EXCLUSIVELY THROUGH **THE KAYO CORP**

THE PLYS

Top two plys are not drilled resulting in a stronger deck with more pop

Beyond the physical features and overall appearance of the new Inerlock boards, comes a superior manufacturing process which stands to revolutionize the skateboard market as you know it. The top two plys are not drilled, resulting in more pop with less of a risk of breaking at the truck holes. More hands-on-craftmanship goes into each individual Inerlock deck, more than any other brand currently available in our industry. These boards are produced one at a time and put through a unique double press process that directly results in solid board performance, consistency, and quality control that you absolutely do not get with the inferior batch wood pressing.

Based on the binding-insert concept used on snowboards, Inerlock decks feature eight threaded stainless-steel inserts inside the deck. These, essentially, replace the nuts used with conventional mounting hardware. Trucks are mounted to the Inerlock deck with nylon-coated machine screws (supplied with each deck) fastened through the baseplates.

INSERTS

Eight stainless steel inserts together with eight Inerlock screws weigh 50% lighter than conventional mounting hardware
